

Fork Positioners

A fork positioner is actually a tool made out of high quality materials intended to endure the most difficult procedures and work environments. This particular piece of equipment can enable the person driving to operate the forks hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the entire load or the arms so as to facilitate more accurate lifting and position in a quicker and more effective method.

The fork pocket is somewhat unique and enables the one operating it to safely sway the forks into position without any fear of damaging the positioning cylinders. This can allow the driver the choice to be able to execute independent or simultaneous fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages can be converted into blade positioners on existing units.
